Molécules traitées

Treated molecules

It is with its electromagnetic field that the D-SCALER breaks up the limestone molecules, it can stop the worst hard municipal water problems, the range of devices is suitable for residential homes as well as commercial and industrial buildings. Several municipalities have problems with hard water, even if it is good for health limestone damages plumbing and appliances such as water heaters, kettles, dishwashers etc. The untreated limestone is deposited on the walls and prevents the appliances from functioning properly. In a safe way, D-SCALER often surpasses expectations and has proven to be more effective than salt water softeners in clinical military trials.
